

# Pretrial Assessments

Determine release recommendations seamlessly, consistently, and confidently with automated assessments

With the Northpointe Suite's library of automated pretrial assessments, options for configurable release and condition matrices, and customizable court reports, your team can easily gather and present key information for more expedited release decisions. By relying on research-based recommendations and a large, robust selection of pretrial risk assessment instruments, the process can become simplified and more efficient for your entire team.

## Key Features

Library of screening tools including the PSA, VPRAI, VPRAI-R, ORAS-PAT, PRAXIS, CAPA-R, and more

Configurable release and condition matrices

Dashboards, notifications, and reminders

Customized court reports

Real-time assessment queues

Streamlined planning capabilities

Seamless configuration

## With equivant Pretrial, your agency can:

- Secure nationally-recognized, validated pretrial instruments along with a library of alternative screenings and offense-specific assessments to support your local policies and workflows
- Make informed decisions based on evidence-based data and recommendations
- Mitigate risk by removing subjectivity from release decisions
- Give time back to your staff with more efficient processes
- Increase appearance rates with automated reminders
- Organize all defendant and assessment data under a master person record to view the span of activity at either a person or case level
- Provide a pretrial case summary detailing key information such as charges, bond recommendation, release conditions, and next court date for the Judge and other stakeholders

**Implement validated instruments into your processes to drive efficiencies, optimize operations, and enhance public safety.**
